2015-05 v1 - 13 October 2015

aims to fix competivite disvantage of LIRs born after 14/09/2012 day of triggering of section 5.1 of IPv4 Address Allocation policy

- aims to address the trend of end-customers sign up as LIRs when space as small as a /24 cannot be provided by their LIR

- didn't receive consensus

- main objection: will speed up IPv4 depletion

2015-05 v2 - 12 April 2016

- changes form version 1:
  - Additional /22 IPv4 allocations can be only provided from address space outside 185/8
  - Only LIRs with less than a /20 in total are eligible to receive additional allocations
  - LIRs must document their IPv6 deployment as part of the request

RIPE

2015-05 v2 - Status

- There are supporters but no consensus

- Main supporter arguments:

  – Yes, we need more space to be competitive

  – difference between old and current LIRs is consistent

- Main objection are:

  – will speed up depletion of IPv4 pool

  – last /8 policy is working well as is

  – address space can be gathered in the market
