

And the KSK is Changing Too

Paul Hoffman | RIPE 72 | May 2016

A brief overview of the upcoming KSK rollover

- ⦿ The KSK rollover process will start after the ZSK is successfully changed to 2048 bits
- ⦿ ICANN and Verisign are working on operational plans now, based on the output of the community design team
- ⦿ There might be some operational issues during the rollover that could cause a rollback
- ⦿ There will be much more technical information as we progress
