#RIPE72

ripe-637

- Ripe-637 states:

“Notice that none of the provider independent resources may be sub-assigned to a third party.”

- RIPE NCC interpretation:

Users using one IP (/128) from a /64 prefix (e.g. on in a public wifi) is a sub-allocation. Therefore IPv6 PI is declined.

Can we fix this?

- a) Define a “sub-allocation” as /64 or larger
- b) Add a statement that giving single IPs to users is ok
- c) ..?
