

IPv6 Availability of Open Source Code Repositories

Wolfgang Zenker

CPH, 26. May 2016

„... open source refers to a computer program in which the source code is available to the general public ...

-Wikipedia

**... but is it true for members of the general public
using IPv6-only networks?**

We try to answer this by looking at the FreeBSD Ports Collection.

We try to answer this by looking at the FreeBSD Ports Collection.

At 2015-12-14 there were **25.522 ports** in the Ports Collection.

25.522 ports

25.522 ports

5.344 different hosts

3.925 hosts which had **only an IPv4** address

3.925 hosts which had **only an IPv4** address

0 hosts which had **only an IPv6** address

3.925 hosts which had **only an IPv4** address
0 hosts which had **only an IPv6** address
1.419 hosts with both **IPv4 and IPv6** addresses

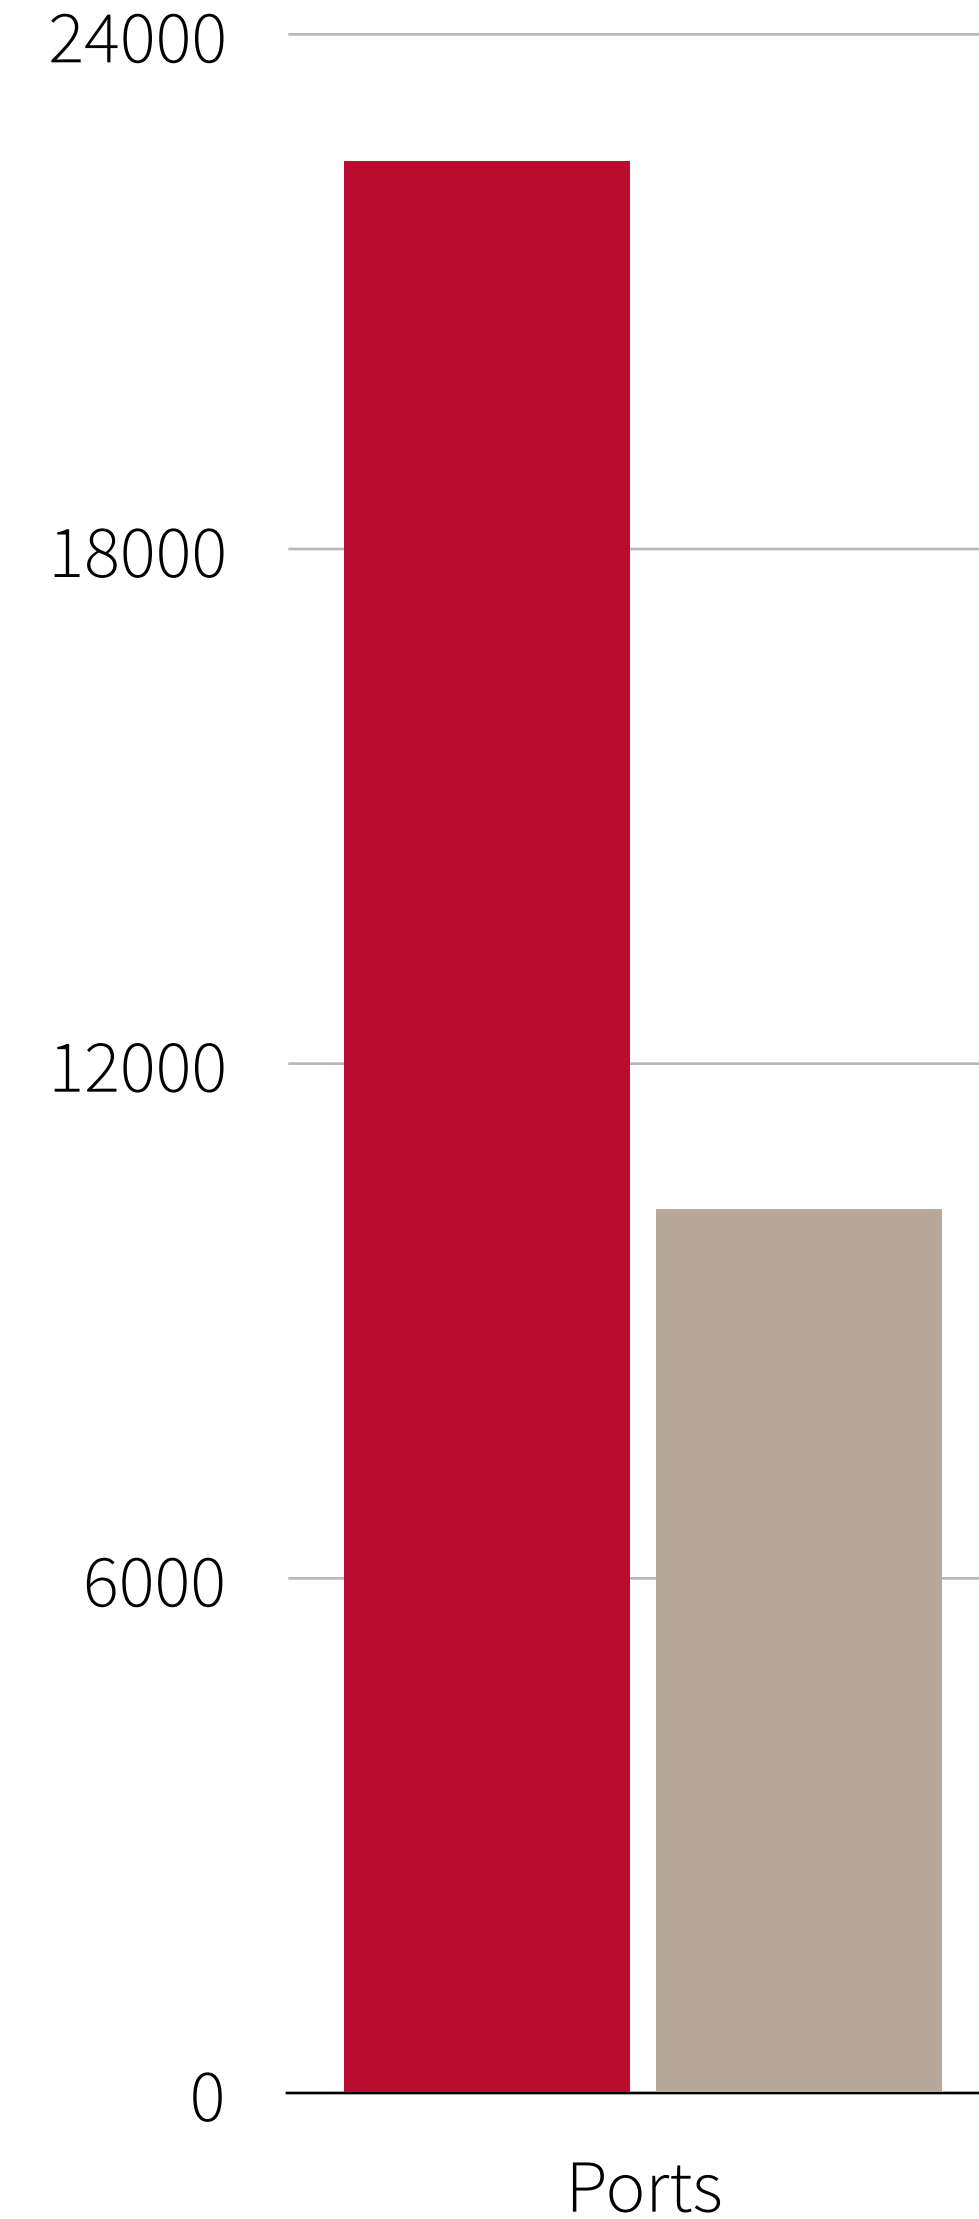

3.925 hosts which had **only an IPv4** address
0 hosts which had **only an IPv6** address
1.419 hosts with both **IPv4 and IPv6** addresses
359 hosts without a resolvable DNS record

Of the **25.522 ports** there were **10.308** where the source could not be downloaded via IPv6.

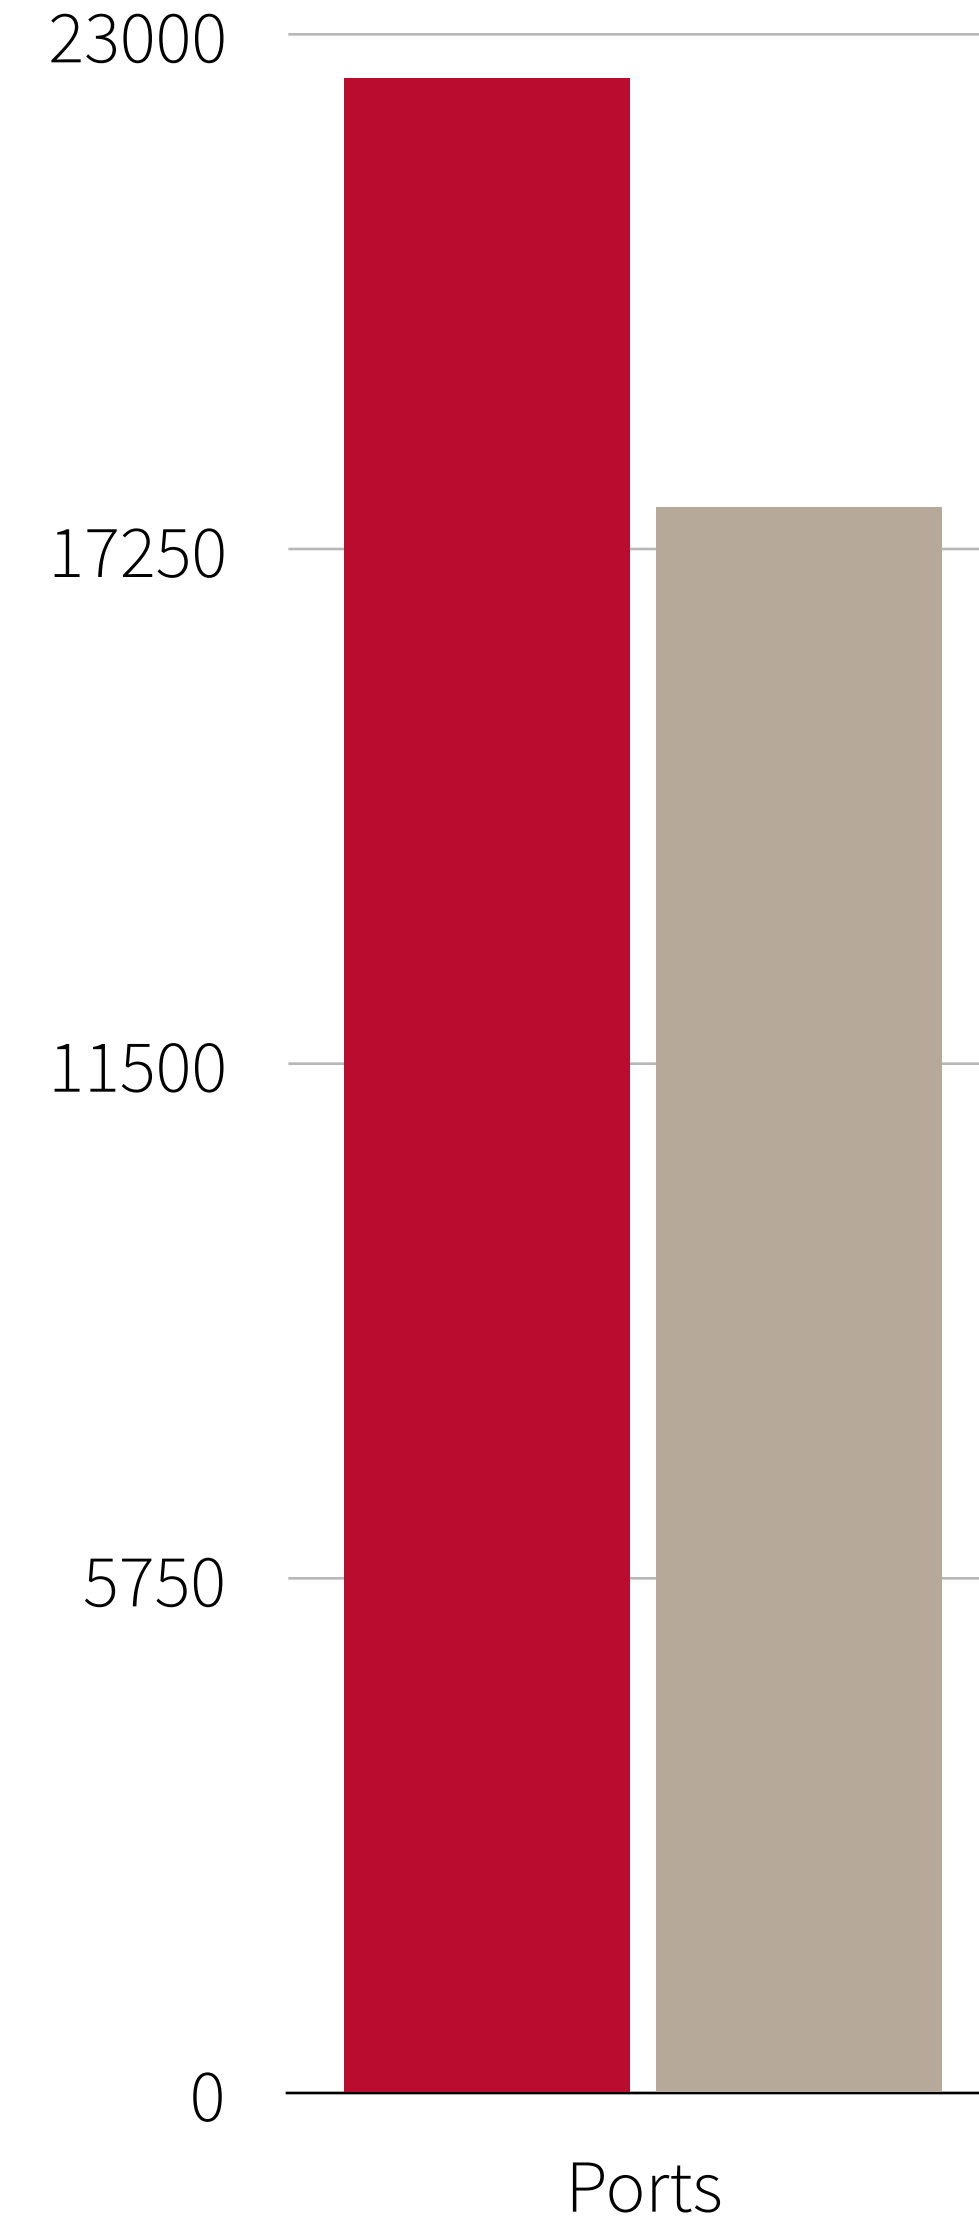

This amounts to **40.38 %** of the portstree.

but ... dependencies!

So **17.715 ports** could not be built
by an IPv6-only user

amounting to **69.4 %** of the ports.

Taking a closer look at the TOP 25 IPv4 only hosts

These 25 hosts provide source
code downloads for 8235 ports.

Sites	Ports	Results
3	2898	CDN does not support IPv6 (CDN: fastly)
8	4092	Cloud provider does not support IPv6 (Cloud: AWS)
4	503	enabled IPv6 now
10	742	no clear results yet

Room for questions
