Policy proposal info

- Author – Erik Bais

- Current status : Review Phase: Awaiting Decision from Working Group Chair
  - Extended

- Version online – v3

Policy proposal

- In short : Create a single policy document, with all relevant policy text.

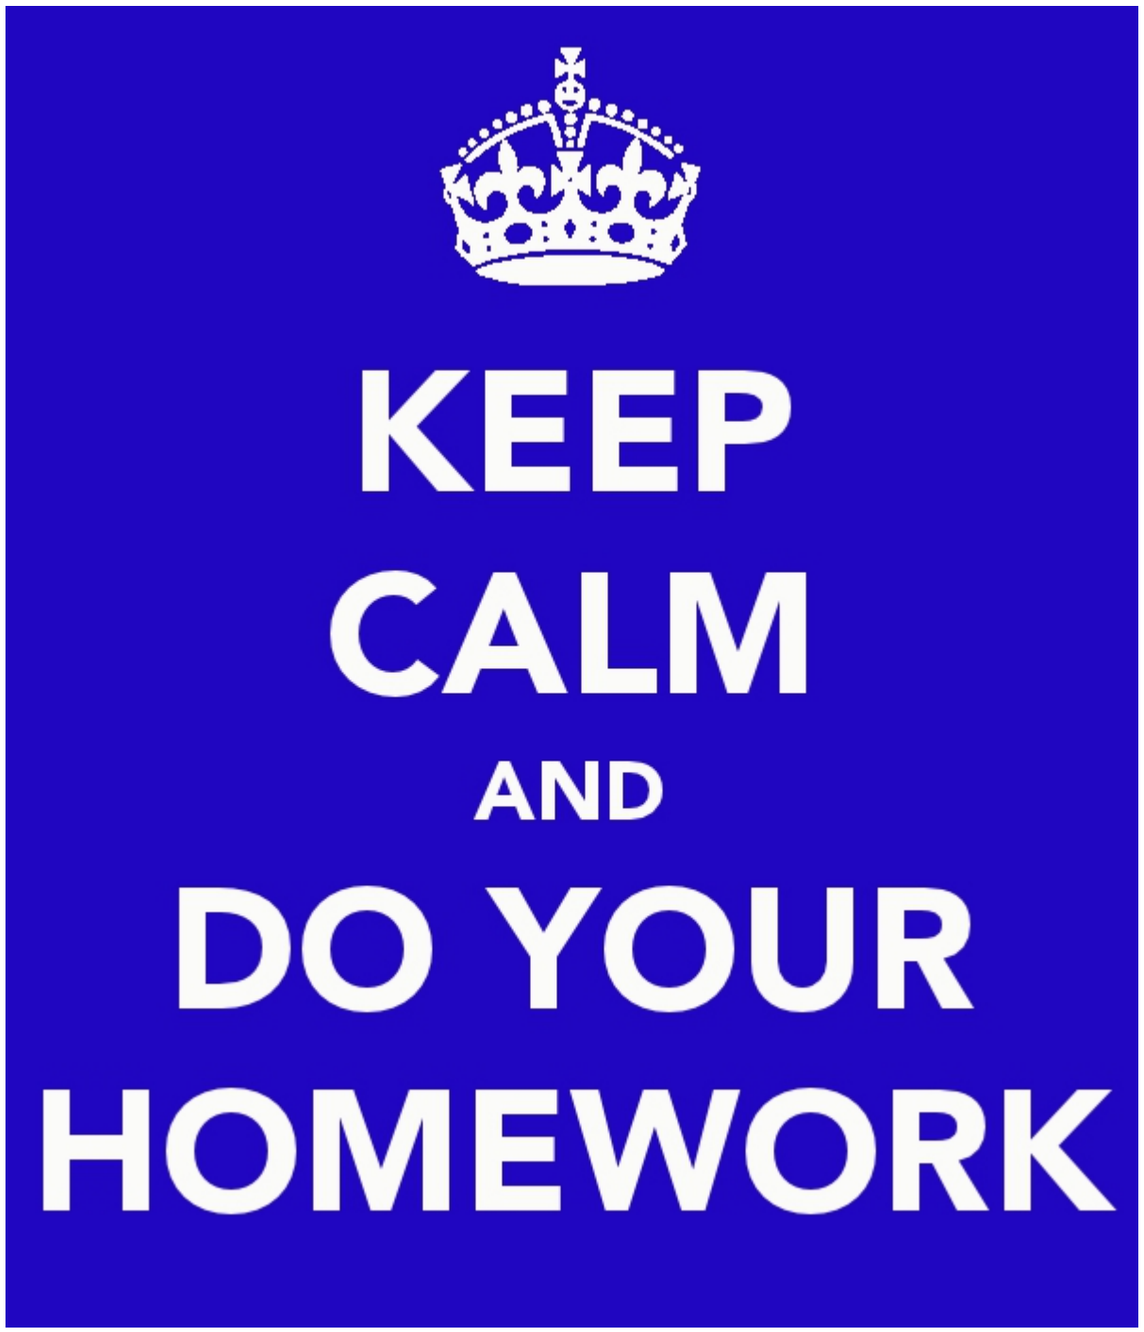
- The goal is to remove all transfer related text from the other policy documents and stream-line where possible the policy text to a common agreed policy text.

The general idea …

- The goal of starting this proposal …
  - Is to clean-up the various allocations / assignment / ipv4/ipv6 and AS number documents …
  - And the thinking was quite sound and logical ..

And is it ??? …

What we did after RIPE71



What we did after RIPE71

- Reviewed the complete policy and make the required (legal) changes..

- We being ... :
  - Marco Schmid (Policy Development Officer)
  - Athina Fragkouli (RIPE NCC Legal Council)
  - Myself … (Erik Bais – Author of 2015-04)

So where are we exactly ??

Questions to answer

- Do we want functional policy documents that cover … all … ? …

- Are we planning to do similar documents or is this a special ?
  - IPv4 Address Allocation and Assignment
  - IPv6 Address Allocation and Assignment

    vs
  - Transfer document

You've done something different !!

Other options in policy writing

- As we have always done it .. (per resource)
- Per functional area .. Like this transfer policy ..
- Or perhaps everything in 1 document.. Similar as ARIN does it..

How to proceed

- Proceed with 2015-04.

- Yes it is different .. But that is ok too .. ;-)

- Decide if we need to review the current structure in a special task-force …

Questions?

So long and thanks for all the fish …
